

## COVERAGE

As part of the 1963, 1958, and 1954 censuses of manufactures, selected separate data were collected on mine or quarry operations at cement, lime, clay products, and gypsum products plants. For dimension stone quarries operated with dressing plants, which are classified in the manufactures census, complete reports for the quarry and dressing plants essentially comparable to those for the minerals census were obtained. The statistics for all these mining operations which are included in the census of manufactures are summarized in this report and included separately in the reports for the related mineral industries. Such inclusion provides statistics more nearly comparable to those available for minerals censuses prior to 1954.
